2. transferCertificate-1761648249018.png
3. communityCertificate-1761648249020.png
4. incomeCertificate-1761648249021.pdf
5. aadharCopy-1761648249022.pdf
6. allotmentOrder-1761648249023.pdf

Nishanth A

Full Stack Developer

 nishanth20112003@gmail.com

 6369032375

SKILLS

- HTML
- CSS
- BOOTSTRAP
- TAILWIND CSS
- FRAMER MOTION
- JAVASCRIPT
- REACT JS
- NEXT JS
- MONGO DB
- MOONGSE
- NODE JS

PORTFOLIO

nishanth20portfolio.netlify.app

PROJECTS

- HRMS
- Aruna Caterer
- Bookmycabs Taxi booking
- Job Portal
- Shadow Arrow
- EdibbleCups
- Appraisal System
- Explore Munar Tourist Agency Site
- Explore Munar Admin Pannel

PROFILE

Full Stack Developer with 2 years of experience building scalable web applications using modern front-end and back-end technologies. Looking to leverage proven skills in designing, developing, and deploying solutions to drive business success.

WORK EXPERIENCE

FRONTEND DEVELOPER

Next skill Technologies

Nov 2023 to Nov 2024

FRONTEND DEVELOPER

Quantum Pulse Technologies

Dec 2024 to Till Date

ROLES & RESPONSIBILTIES

- Developed and maintained responsive websites and dashboard applications, seamless user experiences across devices and browsers.
- Translated UI/UX designs into clean, reusable, and optimized code using modern frontend technologies (React.js, Next.js, Tailwind CSS, etc.).

EDUCATION HISTORY

B.SC-IT

Year of passing - 2023
Coimbatore

Sankara College of science and commerce

Percentage - 95%

CERTIFICATION

Full Stack (MERN)

CODEKARO

React Js

DP CODES

A global company in innovation, Payoda is at the frontline of Digital Transformation to enable enterprises across the industries in the cutting edge technology areas of cloud, advanced analytics, and User Experience. **Join us to be part of the disruptive journey!.**

Does the challenge of driving decisions in a dynamic environment excite you? Are you seeking an environment where you can drive innovation? Are you a passionate self-starter? If the answer to the above questions is a resounding “YES”, we have found each other!

Client: Apple

Location: Hyderabad (Hybrid mode)

The Maps team is developing tools to analyze, visualize, process, manage and curate data on a large scale. Our team combines disparate signals such as data analytics, community engagement, and user feedback to improve the Maps Platform. On any given day you may be asked to analyze large data sets to identify errors in the map, design and implement a complex algorithm for resolving the issue, review the solution with a team of engineers and analysts, and integrate the resulting solution into the data processing pipeline.

We are looking for engineers who can be part of the team building a massive, scalable, distributed system for enabling the maps data platform. Successful candidates will have exceptional engineering and communication skills and believe that data-driven feedback leads to great products.

Key Qualifications

- 2+ years of experience working in a software product development organization building modern and scalable big data applications
- Expertise with functional programming.
- Experience in developing REST-based micro services in Java, Python
- Experience with NoSQL and SQL databases with familiarity with the Cassandra database
- Experience in building low latency high transactional services
- Strong knowledge of Data Structure and Algorithms

Additional Requirements

Familiarity with GeoSpatial concepts is a plus

Let's celebrate work! Join us!
